Subject: M6H1 – Harvey Response: Water Assessments Workload
Date: Sunday, September 3, 2017 10:35:26 AM

According to RM, we only have 108 public water systems to assess. Our direction has been to only assess those with a status of UNKNOWN or SITE. The INOPs are typically power loss, water line damage, etc. So those would not need an on-site visit but I have requested Andy to see if TCEQ (Letty) would like us to do some QA on the INOPs to see if they need to be flipped to "SITE" status or if TCEQ wants us to look at other assessment status types to visit.

The phone calls have only been to Community systems and to Non-Transients that are health care or other critical facilities (hospitals, etc).

The four folks that are coming down today should be sufficient for now.

Thanks,

Mark
